

AWT Webinar Series

AWT Webinar: Choosing The Right Filtration System Will Help Maximize Your Cooling Tower Efficiencies

Manufacturing facilities are routinely reviewing their system's water quality and treatment levels to prevent early and rapid corrosion, scale and biological growth; leading to unplanned facility maintenance and/or shutdown. This webinar with Mike Ditton, Vortisand, will explore how you can improve your cooling efficiencies by choosing the right filtration system. The session will also review the relationship between suspended solids and particle size, along with the negative impact they have on your process, cooling tower, water loops, and chillers. Attendees will also learn about key challenges faced by HVAC facility managers and how filtration plays a crucial part of the solution. Finally, the webinar will review the use of various filtration technologies and their role within the filtration process.

Wednesday, May 9, 2018; 11:00 am ET
